技术规格

Background:	This gene encodes a bifunctional signal transduction molecule. Dopaminergic and glutamatergic receptor stimulation regulates its phosphorylation and function as a kinase or phosphatase inhibitor. As a target for dopamine, this gene may serve as a therapeutic target for neurologic and psychiatric disorders. Multiple transcript variants encoding different isoforms have been found for this gene
Applications:	ELISA, IHC
Name of antibody:	PPP1R1B
Immunogen:	Fusion protein of human PPP1R1B
