技术规格

Background:	This gene encodes a member of the tyrosine kinase and, more specifically, the Janus kinases (JAKs) prot ein families. This protein associates with the cytopla smic domain of type I and type II cytokine receptor s and promulgate cytokine signals by phosphorylating receptor subunits. It is also component of both the type I and type III interferon signaling pathways. As such, it may play a role in anti-viral immunity. A mutation in this gene has been associated with hyperimmunoglobulin E syndrome (HIES) - a primary immunodeficiency characterized by elevated serum immunoglobulin E.
Applications:	ELISA, IHC
Name of antibody:	TYK2

Immunogen:	Fusion protein of human TYK2
Full name:	tyrosine kinase 2
